Internal deliberative, do not cite or distribute

This chemical and its path to registration is really complex and a lot of this is coming from the type of action and OGC's questions. We have been talking with RD several times a week over the last few and this is something that came up yesterday. PRIA date is Tuesday.

Internal deliberative do not cite or distribute

Ex. 5 Deliberative Process (DP)

Yes, 9:30 works for me. Please send me the meeting info and I will be there.

Is the NU for Asian citrus psyllid?

Yes, tomorrow is good. Michael has his general with me at 9:30 if that works for you. Yes, still granular and systemic. The proposed use is for citrus which used to be a registered use but was cancelled in like 2010, but now another registrant took over chemical and is trying to add back in citrus. Use will be limited to FL and to 100,000 treated acres (production cap).

Sorry I didn't get back to you sooner. I can talk. Do you want to talk first thing tomorrow?

Some questions I have that will come up: Does aldicarb still have only granular uses? Is it systemic?

Hi Kris – I sent a note through Teams, but I'm not sure how that's working for everyone, so I thought I would send a follow-up email too. Michael and I are working on a new use for aldicarb and have some questions on a path forward for assessing risks to honey bees without Tier 1 aldicarb honey bee data. Do you have some time today for a chat with us? We want to pick your brain on some things. Unfortunately this has a very short fuse - answers by tomorrow.
